

Qihang Feng

Edmonton, AB, Canada

(825)-983-1896 | q7feng@gmail.com | [LinkedIn](#) | [Beaver Explorers Channel](#)

Summary of Qualifications

- Proficient in Python, C++, JavaScript, Rust, SQL, and Git, with hands-on experience in software development, data processing and web development.
 - Solid understanding of deep learning workflows and neural network design, with practical PyTorch experience in model training, evaluation and optimization.
 - Strong foundation in data structures, testing, and modular code design, with experience translating technical work into documentation and reproducible results.
-

Experience

Data Assistant, Campus AI Pilot Program

Apr 2023 - Jul 2023

Nanjing University of Posts and Telecommunications, Nanjing, China

- Reviewed model outputs and corrected labels against written guidelines, improving precision by 16% on a sample set.
 - Automated defect tracking and validation checks with Python, reducing review time per one thousand items by 40%.
 - Documented reproducible issues with clear steps, screenshots, and Git-based reports, enabling root cause analysis and follow-up fixes.
-

Course Projects

Reliable LIME under Query Budget Constraints, Python, scikit-learn

- Built a budget sweep evaluation pipeline with custom metrics, enabling systematic comparison of explanation stability, quality, and efficiency under query limits.
- Designed a coarse-to-fine budget allocation strategy for image explanations, capturing key regions under lower budgets and improving the faithfulness metric.

Object Placement Localization in Street Scenes, Python, PyTorch

- Built a text guided pipeline to predict where the target can be placed in a street scene, nearly tripling validation localization performance as measured by IoU.
- Ran ablation studies across components, which identified the main driver of localization gains and clarified which design choice truly improved results.

Red-Black Tree and AVL Tree Implementation, Rust

- Designed reusable `TreeNode<T>` and `TreeOps<T>` abstractions with shared generic rotation logic, enabling modular and extensible tree implementations.
 - Built Criterion benchmarks for both trees, enabling consistent comparison and validating stable behavior under tested workloads.
-

Education

Master of Engineering in Electrical and Computer Engineering

May 2027

University of Alberta, Edmonton, AB

- Specialization in Software Engineering and Intelligent Systems

Bachelor of Engineering in Internet of Things Engineering

Jun 2023

Nanjing University of Posts and Telecommunications, Nanjing, China
